Geography 12

Thinking Geographically Activity

1) Looking at the map of “NHL cities in 2003”, what are two facts that you can state **based solely** on the information given on the map?

2) What changes have occurred between the 1982 Map and 2003 Map?

3) Why have these changes occurred? (**Note:** Even if you know little about hockey, you can explain some of the changes by reflecting upon the economic factors and historical events that occurred during the 21 year time period between the two maps.)

4) In what ways are these changes significant? (**Hint:** Analyze from an economic, cultural, and historical perspective.)

5) Looking at the map “The Night Lights of North America”, what are two facts that you can state **based solely** on the information given on the map?

6) What patterns are evident on the map? (**Note:** To assist you in describing these, you may use maps of North America in your atlas to reference physical features and place names.)

7) Why do these patterns exist? (i.e. speculate, hypothesize, analyze)

8) What difference does it make? (i.e. Who or what could be affected by these patterns? Why are these patterns significant? **Consider from an economic, political, and environmental perspective.**)
